

Intel® Teach Program Skills for Success Course

Use technology to expand student potential.

This course from the Intel® Teach Program is designed to help computer teachers implement provided curriculum with a focus on technology literacy. It is ideal for those who teach computing and basic computer skills, especially for grades 5–9.

Make technology literacy, critical thinking, and collaboration part of your curriculum.

- Teach technology-based curriculum that includes technology literacy, critical thinking, and collaboration.
- Learn teaching methodologies that support technology literacy.
- Integrate computing basics, such as word processing and spreadsheets.
- Become a facilitator of student-directed learning and project-based work.
