

Gesture Viewer - Virtual Hand

Remember all these great science fiction movies, where agents can control objects on a screen with just a flick of a wrist? Welcome to that future.

Special 3D depth cameras used with Intel's Perceptual Computing software development kit can see each of your finger tips

Control your virtual hand which will let you touch and manipulate objects on your device's screen. You can now flip a page on your next generation ebooks, control remote robot arms or simply, grab and move around your computer's files to get more organized.
