

# Data Center Power and Thermals Group Enabled Management System (GEMS)

## Features

- Intelligent group discovery, formation and self-organization of computer systems
- Aggregates Intel platforms into functional groups
- Enables group-level thermal monitoring and power optimization

## Benefits

- Simplified and scalable management
- Lower cost for power and cooling
- Reduce overall total cost of ownership

## Key Capabilities

- Group formation: Discovery, self organization of platforms into groups, election for group leader
- Group management: Group level operations, monitoring, policies and optimizations
