

Establishing an OverMesh Network with the Intel-powered classmate PC

Decentralized Computing

- Heterogeneous (mesh) networks
- Client-centric computing
- Distributed virtual machines (DVM)
- Centralized infrastructure co-existence

Decentralized Services

- Peer-to-peer applications
- Automatic services discovery
- DVM service dispatching

Decentralized Manageability

- Self-organizing, virtual clusters
- Zero-configuration
- Automated network deployment
- Community trust & security
