

## HP and VMware Change and Configuration pack

An HP Software virtualization management solution

### Meeting today's IT challenges

As your business expands or contracts, your IT complexity expands and contracts and the rate of change increases. In today's dynamic and virtualized IT environment, change can be disruptive, causing delay and increasing risk. Still, you don't want to rush changes because inadequate change planning and implementation can result in underutilized resources and wasted money.

Combining HP's Management Software for enterprise business with VMware's technology suite, and leading implementation service providers, our HP and VMware change and configuration pack gives IT managers and CIOs a solution for managing the complexities of change in a virtualized infrastructure.

### HP and VMware Change and Configuration pack

Moving to a virtual IT infrastructure requires careful planning and, after implementation, the ability to manage a complex IT organization. You will also need a mechanism to track and control the rapid changes that can occur in a virtualized infrastructure. Incorporating change and configuration management

processes helps you optimize the planning, control, execution and validation of change in your applications and IT operations, both physical and virtual-enabling all of your devices to stay in their desired state according to your policies.

The decision to move to a virtualized environment is easy. Knowing how, and exactly what tools and services you will need is the challenge. We've simplified this process by creating a change and configuration management pack, or bundle of software and services, to get you started. The management tools and technologies used to create this pack are from HP and VMware, and will help you design the appropriate solution for your business.

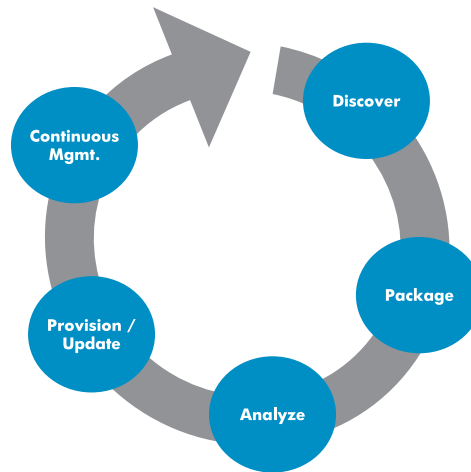

### HP Software

The Change and Configuration pack focuses on IT change and configuration management functions and features:

- HP Configuration Management software (for Servers/for Clients)
  - HP Configuration Management Application Manager
  - HP Configuration Management OS Manager
  - HP Configuration Management Patch Manager

Figure 1. The HP and VMware change and configuration management solution lifecycle.

- HP Configuration Management Inventory Manager
- HP Configuration Management Settings Migration Manager

- HP Change Control Management software
- HP Enterprise Discovery software

## Implementation services

We are working with leading service providers to help you with the design and deployment of the virtualization and management software to optimize your business outcomes. For assistance in locating a service provider in your region, contact your HP or VMware sales representative.

## VMware Infrastructure 3

HP virtualization solutions work with VMware® Infrastructure 3. This software allows you to consolidate your servers and create your virtualized infrastructure. The suite includes:

- VMware ESX Server
- VMware High Availability (HA)

- VMware Distributed Resource Scheduler (DRS)
- VMware VMotion™
- VMware Consolidated Backup

For more information on VMware Infrastructure 3 products visit [www.vmware.com/products/vi/](http://www.vmware.com/products/vi/).

## A comprehensive portfolio

For companies that need to reduce costs, increase agility and align IT supply with business demand, HP, and VMware deliver a comprehensive portfolio of IT virtualization solutions. We have the process and technology expertise to help your organization achieve real business benefits from virtualization today.
