

## HP and VMware Operations pack

An HP Software virtualization management solution

### IT virtualization management

Combining HP's Management Software for enterprise business with nworks Smart Plug-in (SPI), and VMware's technology suite, and leading implementation service providers, our IT virtualization management solution gives IT managers and CIOs a holistic framework for managing the complexities of a virtualized infrastructure.

### HP and VMware Operations pack

The decision to move to a virtualized environment is easy. Knowing how, and exactly what tools and services you will need is the challenge. We've simplified this process by creating an Operations management pack, or bundle of software and services, to get you started. The management tools and technologies used to create this pack are from HP, VMware and nworks, and will help you design the appropriate solution for your business.

### HP Software

The Operations pack focuses on IT operations and service management functions. The HP Software products in the Operations pack are:

- HP Systems Insight Manager software for hardware-oriented management and monitoring
- HP Operations Manager software for system software and application system management
- HP Performance Agent software
- HP Performance Insight software

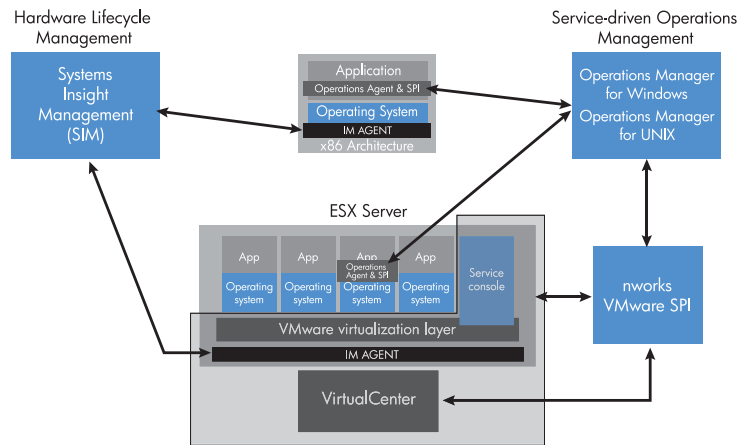

For more information on these products visit [www.hp.com/go/managementsoftware](http://www.hp.com/go/managementsoftware).

### Implementation services

We are working with leading service providers to help you with the design and deployment of the virtualization and management software to optimize your business outcomes. For assistance in locating a service provider in your region, contact your HP or VMware sales representative.

### VMware Infrastructure 3

HP virtualization management solutions work with VMware® Infrastructure 3. VMware's VI3 software allows you to consolidate your servers and create your virtualized infrastructure. The suite includes:

- VMware ESX Server
- VMware High Availability (HA)
- VMware Distributed Resource Scheduler (DRS)
- VMware VMotion™
- VMware Consolidated Backup

For more information on VMware Infrastructure 3 products visit [www.vmware.com/products/vi/](http://www.vmware.com/products/vi/).

### nworks SPI for VMware

To manage IT as a service in a virtualized infrastructure you need a way for HP Operations Manager and VMware to communicate. The nworks Smart Plug-in (SPI) for VMware does this by providing performance, configuration, and event monitoring services that allow you to visualize your ESX Server farms and their hosted virtual machines. The nworks SPI enables a "single pane of glass" view of your IT operations by linking your virtual infrastructure with HP Operations Manager. To learn more about the nworks SPI for VMware visit [www.nworks.com](http://www.nworks.com).

### A comprehensive portfolio

For companies that need to reduce costs, increase agility and align IT supply with business demand, HP, VMware and nworks deliver a comprehensive portfolio of IT virtualization solutions. We have the process and technology expertise to help your organization achieve real business benefits from virtualization today.
