

Security Services for eBusiness

Compaq NonStop™ solutions for your networked world

Compaq Security Services help you meet global eBusiness security requirements you need — today and tomorrow:

- *Plan from start to finish for your global enterprise*
- *Trust that your network is safe for customers, partners, and suppliers*
- *Protect your online investments*

Securing your eBusiness infrastructure

eBusiness dramatically changes the security landscape. Your network has gotten larger. Customers and business partners directly access your network and applications. But your policies, controls, and management practices may not have kept pace.

Enter *Compaq NonStop™* security services — all you need for secure communications in your eBusiness — throughout your solutions lifecycle.

eBusiness Security Solutions from Compaq Services cover your security needs from start to finish. From a fast and thorough assessment of your current systems and networks to implementing and maintaining a secure infrastructure, Compaq has the experience and expertise to keep your eBusiness running safely.

COMPAQ

NonStop™

The new landscape

Competing in today's marketplace means eBusiness — and that means the Web. The goals of securing the enterprise network remain the same: enterprises need to protect people, property, information, and reputation. But the landscape you must secure has changed — security has to be an integral part of your eCommerce architecture. You now need to supply information wherever, whenever and however employees, customers, and business partners need it. How do you provide simultaneous access and protection in this new environment?

Build confidence across your extended network

Compaq offers a comprehensive set of services to help you with every step of your security solution:

- *Assessment and Review services evaluate your security controls and policies and assess their ability to protect your assets — both today and tomorrow.*
- *Design services use the findings of a review to produce a policy and specific standards that integrate appropriate security controls with business needs.*
- *Implementation services provide the project management, systems expertise, and training to ensure the proper installation and administration of security policy and standards across multiple security technologies.*
- *Management services provide complete management of a secure Web environment — policies, Web servers, firewalls, and tunnels — and round-the-clock monitoring.*
- *Support services ensure timely support for your business-critical security infrastructure — anytime, anywhere.*

An end-to-end security program from Compaq is the key to providing simultaneous access and protection.

Security solutions: more than just a firewall

With millions of Web users now reaching your front door, you face both an enormous business opportunity and an enormous risk. To help you design your Internet security program, Compaq has packaged a set of solutions that cover the full range of enterprise security needs, including:

- *Perimeter protection with firewalls and intrusion detection, including highly-available firewalls*
- *Secure extranets and remote access with Virtual Private Networks (VPNs) including highly-available VPNs.*
- *Content security with virus protection*
- *Strong authentication to ensure the integrity of high-value transactions with Public-Key Infrastructure (PKI) technology*

Customize any service to meet your unique security needs using best-in-class products from industry-leading security solutions partners such as Check Point, Cisco, AXENT, Nortel Networks, and Entrust Technologies.

Why choose Compaq?

Compaq has unrivaled experience designing and installing Internet security systems and has successfully completed thousands of security and networking projects. We offer:

- *All you need to develop the right Internet security program for your eBusiness.*
- *Years of experience integrating security solutions for enterprises, government agencies and network service providers around the world — including more than 500 high-end firewalls.*
- *Expertise for implementing high-availability security solutions.*
- *A complete portfolio of security solutions from industry leaders for the right technology to protect your assets.*
- *Seasoned security solution architects working in close collaboration with customers.*
- *Leading platforms for security, from ProLiant servers for Windows NT® to our Atalla Security hardware products for performance acceleration.*
