

SharePoint Portal Server Customer Solutions Deployed by Compaq

Compaq is a Global Launch Partner of Microsoft for SharePoint Portal Server. Through this partnership Compaq has taken a leadership position in deploying SharePoint Portal Server based solutions that address real customer business needs. With extensive knowledge of SharePoint Portal Server technology, Compaq specializes in solving requirements for:

- Portal Solutions
- Document Management Solutions
- Collaborative Applications

The Compaq **Publishing and Intranet Portal Solution** helps organizations publish information rapidly to the enterprise.

The Compaq **Information Search Portal Solution** helps users seek the right information from a broader set of enterprise and Internet sources tailored to individual requirements.

The Compaq **Document Management Solution** migrates documents from file services and legacy document management systems into a new and easy web based document management solution.

The Compaq **Collaborative Application** helps organizations that need custom collaborative workflow solutions.

The Compaq **Custom SharePoint Portal Server Solution** combines our document management, portal, and collaborative application skills to address the most demanding integrated solution requirements.

Below are some SharePoint Portal Server Solutions that Compaq has deployed.

- **Lifetime Television (New York City, New York, USA)**
- **Irish Local Government Computer Services Board (Dublin, Ireland)**
- **Tracy Unified School District (Tracy, California, USA)**
- **20Twenty (Cape Town, South Africa)**
- **Royal Danish Ministry of Foreign Affairs (Copenhagen, Denmark)**
- **Maruti (Gurgaon, India)**
- **Telecom Italia Mobile (Rome, Italy)**

Lifetime Television (New York City, New York, USA)

LifeTime wanted to get corporate information to employees faster as well as store and manage a variety of multimedia files. They tried numerous approaches to implement a corporate intranet solution in the past with unsatisfactory results. Compaq implemented a tailored Publishing and Intranet Portal solution supporting document management capabilities using Microsoft SharePoint Portal Server.

The solution addresses their need to:

- Create an organized corporate intranet site where information can quickly be published and made accessible to the enterprise
- Provide a better way of communicating with employees
- Update employees on latest news and changes in the organization
- Collect and share existing corporate intellectual and multimedia properties.

Irish Local Government Computer Services Board (Dublin, Ireland)

The Irish Local Government Computer Services Board identified the need to radically improve the way regulatory documents were published and circulated. They wanted a solution to support the work of over 35,000 government employees. The Compaq Publishing and Intranet Portal Solution using Microsoft's SharePoint Portal Server coupled with enhanced workflow capabilities provided the answer. The solution addresses the need of Legislation and Regulation library management by providing the following:

- A collaborative work environment incorporating versioning and custom workflow approval processes for document publishing
- Event driven e-mail notifications including collaboration deadlines, publishing deadlines, and status change notifications
- User friendly portal interface to the published document library
- A browser registration/validation process using active directory.

Tracy Unified School District (Tracy, California, USA)

Tracy Unified School District had multiple systems around the district serving as document file servers for the users and departments. They wanted to consolidate the documents into a well-managed document management system that has an easy to access web user interface. The Compaq Document Management Solution using Microsoft's SharePoint Portal Server is providing a comprehensive solution for Tracy. The solution includes the following features and benefits:

- A folder hierarchy in the Documents Library that includes a folder for each school and department in the district
- Migration of file share content into the new folder hierarchy
- Custom web parts for easy access to the folder and category hierarchy
- Automated 'mandatory' subscriptions service for all users to get notified of the Superintendent's Announcements.

20Twenty (Cape Town, South Africa)

As a financial institution, 20Twenty wanted to provide collaborative banking environment to facilitate information sharing and collaboration. Compaq's consulting skills helped to provided 20Twenty a custom collaborative virtual banking information solution using Microsoft's SharePoint Portal Server. The solution resulted in:

- Rapid acquisition of mission critical data
- Single repository for storing documentation
- Vital sharing of information in a Virtual Banking operation
- Ability to index data from multiple sources in the virtual environment
- Provide rapid service to "Wired Warriors" clients.

Royal Danish Ministry of Foreign Affairs (Copenhagen, Denmark)

The largest Ministry in Denmark's government, the Danish Ministry of Foreign Affairs needed accurate and timely information of news from around the world. The Compaq Information Portal Solution using Microsoft's SharePoint Portal Server provides an integrated work environment for timely information retrieval and decision-making. The solution incorporates news feeds in a personalized manner from Reuter News services and other news sources into a portal interface. The solution also supports immediate notifications of user-subscribed information.

Maruti (Gurgaon, India)

Maruti Udyog Limited (a joint venture of Suzuki Motor Corporation of Japan with Govt. of India) is the largest auto manufacturer in India. They wanted to publish up-to-the-minute information to employees as well as suppliers and dealers. Compaq delivered a Publishing and Intranet Portal Solution designed to disseminate information quickly and easily. Features include:

- Publication of Corporate News Bulletin, Events and Happenings
- Interface to existing legacy application for information access
- Access to various group related information such as publications, brochures and other product related material and discussions thereon
- Access to various documents on a company-wide basis such as base procurement policies, HR related documents
- Access to Quality Defect Information Report application
- Integration with Microsoft Exchange.

Telecom Italia Mobile (Rome, Italy)

Telecom Italia Mobile is one of the largest mobile communications company in Europe. They wanted to eliminate local PC file services and consolidate documents into a document management system. The Compaq Document Management Solution using Microsoft SharePoint Portal Server provides an efficient and easy to manage solution including:

- Migration of file (local) content into the a managed document library
- Documents Library folder hierarchy designed with personal use only folders
